

SUMMARY

Full Stack Developer specializing in production-grade, real-time web applications. I design low-latency systems with WebSockets and Redis pub/sub, build secure REST APIs with JWT and role-based access, and ship to AWS with Docker and CI/CD. Strong across React, Next.js, Node.js, and TypeScript. Currently interning at Otulia, shipping production features across the stack.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, C++

Frontend: React.js, Next.js, Tailwind CSS, HTML5, CSS3

Backend: Node.js, Express.js, REST APIs, WebSockets, JWT, Sessions

Databases: PostgreSQL, MongoDB, Redis, Prisma

DevOps & Cloud: AWS EC2, Docker, GitHub Actions (CI/CD), Turborepo, PM2

Tools: Git, GitHub, Postman, Binance API, n8n

EXPERIENCE

Full Stack Developer Intern, Otulia

Jan 2026 – Present

Remote

- Ship production features across a React and Node.js stack, collaborating through pull requests, code reviews, and CI on every merge.
- Build and integrate REST APIs and backend logic spanning MongoDB and PostgreSQL data layers.
- Improve end-to-end page performance by optimizing component rendering and client-server API communication.

PROJECTS

Exness — Real-Time Crypto Trading Platform

[Next.js](#), [Node.js](#), [Redis](#), [WebSocket](#), [AWS](#)

- Engineered a Redis pub/sub pipeline that fans live Binance BTC/USDT ticks out to all connected clients, throttling broadcasts to 5 updates/sec (200ms windows) to keep candlestick charts smooth under load.
- Implemented market/limit orders with 1×–20× leverage and margin/PnL settlement using decimal.js arbitrary-precision math to eliminate floating-point errors in money calculations.
- Architected a Turborepo monorepo of 4 services (web, API, WebSocket, poller) and deployed to AWS EC2 with a GitHub Actions CI/CD pipeline for zero-downtime releases.

Repo: github.com/jeetupal31/exness

ExcaliDraw Live — Collaborative Whiteboard

[React](#), [TypeScript](#), [WebSockets](#), [PostgreSQL](#)

- Built a real-time multiplayer whiteboard with live cursors, presence, and version history, syncing edits across clients over a custom WebSocket protocol.
- Enforced editor/viewer permissions server-side and added resilient reconnection with exponential backoff; persisted board state in PostgreSQL via Prisma.
- Integrated AI text-to-diagram so users generate diagrams from plain-English prompts directly onto the shared canvas.

LeetLab — Coding Practice Platform

[React](#), [Node.js](#), [PostgreSQL](#), [Prisma](#)

- Built a LeetCode-style platform running 50+ problems through a Judge0 execution engine, with an in-browser Monaco editor and real-time results.
- Designed REST APIs and a normalized PostgreSQL schema for submissions and leaderboards; secured access with JWT authentication and role-based access control.

Live: leetlab-nu.vercel.app Repo: github.com/jeetupal31/leetlab

AgentFlow — Visual AI Workflow Platform

[TypeScript](#), [Redis/BullMQ](#), [Socket.io](#), [Docker](#)

- Built a drag-and-drop platform to compose and run AI agent pipelines from chained LLM and HTTP nodes.
- Implemented a BullMQ/Redis-backed execution engine that streams per-node status to the UI in real time over Socket.io; containerized the stack with Docker and covered the engine with 29 passing tests.

EDUCATION

B.Tech, Computer Science

2023 – 2027

Chaudhary Charan Singh University, Meerut

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Object-Oriented Programming, Web Technologies.
